MEMORANDUM

To: Paul Iverson (piverson@instructor.yc.edu)
From: 1-Hitter Programmers
Subject: Team Inventory
Date: 1/26/2010

I'd like to take a moment to more thoroughly introduce our team to you. As mentioned in a previous e-mail, our team is made up of 3 expert software developers. We look forward to finding a solution that meets all of your web-store needs.

Steven Lambright

I am the team leader and the website dude. I have, in the past, developed several advanced websites from scratch doing some relating coding such as integrating the forum software phpbb directly into a website for authentication and general input capabilities (enabling BB Code site-wide). I've developed templates/skins for websites in the past also.

My qualifications:

- Designed and developed a website for Integrated Technology Corporation (inttechcorp.com) which resulted directly in my being hired as an employee.
- Aided in configuring and debugging of the U.S. Geological Survey's I.S.I.S. support website. I.S.I.S. is one of the world's most advanced planetary imaging packages.
- I'm interested in the area of web development.

Davis Zanot

E-Mail: djz7@nau.edu

Phone: (928) 301-7695

I am in charge of documentation and analyzing the product to make sure that it conforms to the client's needs.

Qualifications:

- CS 386 – Software Engineering, where I excelled in organization and documentation during the semester long software development project.

Brian Cullinan

E-Mail: bjc76@nau.edu

Phone: (614) 425-6054

I will be the main developer of the back-end technology. The web-store will require a stable back-end for handling and logging purchases and information about customers and the products you offer. Making sure the store flows properly is my area of expertise.

Here are some of my qualifications:

- Designed websites in the past that accept transactions in different ways (Credit cards, Paypal, etc). These projects made me very familiar with the Paypal API and similar transaction authentication concepts.
- Worked with different pre-built store software suites that allow the organization of products and managing an online "cart" for purchasing.
